

Electrically Operated Pressure-Relief Cartridge, Size 10

 Q_{max} = 140 l/min (37 gpm), p_{max} = 350 bar (5000 psi) seated pilot stage, spool-type design, electrically operated Series WUVPOC-1..., WUVPLC-1...

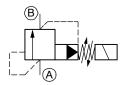

- Compact construction for cavity type
 DC M24x1.5 to Bucher standard
- Bypass circuit ON / OFF
- 2-pressure switching HI / LO
- Damped opening (on request)
- Low unloaded bypass pressure with "OC" model to 100 l/min
- · High pressure wet-armature solenoids
- The slip-on coil can be rotated, and it can be replaced without opening the hydraulic envelope
- Various plug-connector systems and voltages are available
- · All exposed parts with zinc-nickel plating
- · Can be fitted in a line-mounting body

1 Description

Series WUVPOC-1... / WUVPLC-1... and WUVPUC-1... valves are size 10 electrically operated pressure relief cartridges with an M24x1.5 mounting thread. They have a seated pilot stage and a spool-type main stage. Using the external pressure adjustment, the higher pressure p1 (relief setting) and the lower pressure p2 (a secondary pressure, or the unloaded pressure) can be varied smoothly and independently of one another without opening the hydraulic envelope, and either pressure can be selected. The "OC" model is mainly used for bypass circuits that can be unloaded with low Δp values (ON / OFF). The lower Δp values result in less heating of the oil and thus lower energy costs

for the user. The "LC" model is mainly used for 2-pressure circuits (HI / LO). The "UC" model (available on request) is fitted with a damping spool that, by ensuring a damped opening, prevents undesirable pressure spikes. When the pilot stage is active (pressure relief function), pilot oil is drained internally to port B. Any residual- or surge-pressure in port B (Tank) is therefore additive to the valve setting. All external parts of the cartridge are zinc-nickel plated to DIN 50 979 and are thus suitable for use in the harshest operating environments. If you intend to manufacture your own cavities or are designing a line-mounting installation, please refer to the section "Related data sheets".

2 Symbol

3 Technical data

General characteristics	Description, value, unit	
Designation	pressure-relief cartridge valve	
Design	spool-type design, seated pilot, electrically operated	
Mounting method	screw-in cartridge M24 x 1.5	
Tightening torque	65 Nm ± 10 % (50 ft-lbs ± 10 %)	
Size	nominal size 10, cavity type DC to Bucher standard	
Weight	0.52 kg (1.15 lb)	

Reference: 400-P-290101-EN-02

Issue: 03.2018 1/7

General characteristics	Description, value, unit	
Mounting attitude	unrestricted	
Ambient temperature range	-25 °C +50 °C (-13 °F +122 °F)	

Hydraulic characteristics	Description, value, unit	
Maximum operating pressure in port A 1)	350 bar (5000 psi)	
Maximum allowable pressure in port B (tank)	250 bar (3600 psi)	
Pressure adjustment range:	350 bar (5000 psi) 250 bar (3600 psi) 160 bar (2300 psi) 100 bar (1400 psi) 40 bar (570 psi)	
Maximum flow rate	140 l/min (37 gpm) (at > 100 l/min, "LC" model recommended by the manufacturer)	
Flow direction	A → B, see symbols	
Hydraulic fluid	HL and HLP mineral oil to DIN 51 524; for other fluids, please contact BUCHER	
Hydraulic fluid temperature range	-25 °C +80 °C (-13 °F +176 °F)	
Viscosity range	10500 mm ² /s (cSt), recommended 15250 mm ² /s (cSt)	
Minimum fluid cleanliness Cleanliness class to ISO 4406 : 1999	class 20/18/15	

Electrical characteristics	Description, value, unit	
Supply voltage	12 V DC, 24 V DC / 115 V AC, 230 V AC (50 60 Hz)	
Supply voltage tolerance	± 10 %	
Nominal power consumption	V DC = 27 W V AC = 25 W	
Relative duty cycle	100 %	
Protection class to ISO 20 653 / EN 60 529	IP 65 / IP 67 / IP 69K, see "Ordering code" (with appropriate mating connector and proper fitting and sealing)	
Electrical connection	DIN EN 175301-803, 3-pin 2 P+E (standard) for other connectors, see "Ordering code"	

ATTENTION!

1) Any residual- or surge-pressure in port B (tank pressure) is additive to the pressure setting in port A.

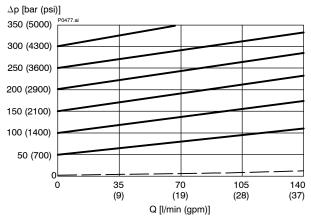

4 Performance graphs

5 Dimensions & sectional view

Type WUVPOC...

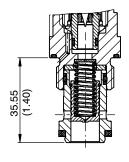

Seal kit NBR no. DS-261-N 2)

Item	Qty.	Description
1	1	Seal ring Ø 22.10 / 16.50 x 2.50
2	1	O-ring no. 021 Ø 23.52 x 1.78 N90
3	2	O-ring Ø16.00 x 2.00 V83

IMPORTANT!

2) Seal kit with FKM (Viton) seals, no. DS-261-V

Type WUVPLC...

6 Installation information

IMPORTANT!

When fitting the cartridges, use the specified tightening torque.

ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.

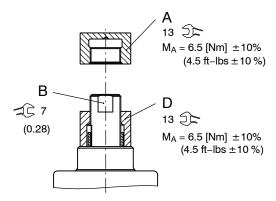

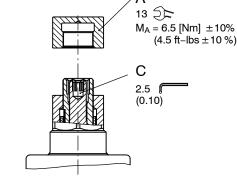

7 Pressure adjustment

(pressure p1 must be set first, followed by pressure p2)

Nr.	Setting the higher pressure p1 on series WUVPOC / WUVPLC as the higher working pressure with solenoid energised:
1)	Slacken and remove cap nut item A (13 A/F).
2)	Slacken lock nut item D (13 A/F) approx. ½ turn.
3)	With pump running and with the solenoid energised, use the two flats (7 A/F) to turn adjusting screw item B until the required pressure is set in port A.
4)	Hold the adjusting screw item B using the 7 A/F flats while tightening the lock nut item D (13 A/F).
5)	Refit and tighten the cap nut item A.

Nr.	Setting the lower pressure p2 (emergency pressure setting) on series WUVPOC / WUVPLC (a second pressure or alternatively, unload) with solenoid de-energised:
1)	Slacken and remove cap nut item A (13 A/F).
2)	With pump running and with the solenoid de-energised, use the adjusting screw item C (2.5 A/F hex. socket) to set the pressure p2 in port A.
3)	Refit and tighten the cap nut item A. (p2 min.: 2 15 bar for WUVPOC, dependent on flow). (p2 min.: 4 8 bar for WUVPLC, dependent on flow).

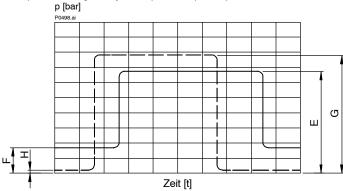

ATTENTION!

When setting pressure p1, adjusting screw item B must not be overtightened as this can damage the shoulder which limits the maximum pressure setting. As soon as a definite end-stop can be felt, do not turn any further.

H = when item C is unscrewed until flush

E, G = pressure p1; as set with item B, solenoid energised

F = pressure p2, min. as H, max. as E and G, adjustable at item C, solenoid de-energised

Type WUVPLC...

The relief pressure p1 is set as the higher working pressure (E) (solenoid energised)

p2 as the lower working pressure (F) (solenoid de-energised)

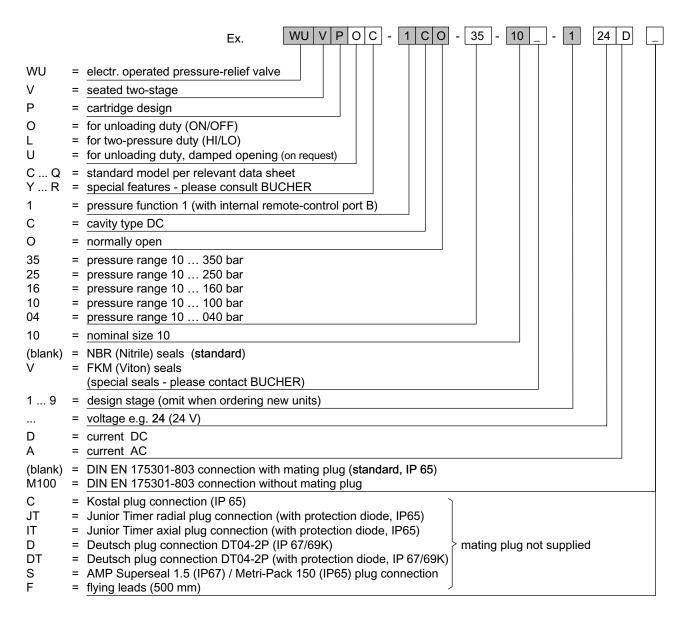

Type WUVPOC... / (WUVPUC... available on request)

The relief pressure p1 is set as the higher working pressure (G) (solenoid energised)

p2 as the lowest unloaded bypass pressure (H) = item C flush (solenoid de-energised)
