Description

The directional control valves, series WKDP42AD-8T..., are size 8 / SAE 10, screw-in cartridge valves with a seated pilot stage and an 7/8-14 UNF-2A mounting thread. They are designed on the proven sliding-spool principle. These screw-in valves are mainly used in mobile and stationary applications for the pilot or directional control of consumers such as hydraulic motors and hydraulic cylinders. The slip-on coils can be

replaced without opening the hydraulic envelope and can be positioned at any angle through 360°. All external parts of the screw-in valves are zinc-nickel plated and are thus suitable for use in the harshest operating environments. For installation and further information, please refer to the section related data sheets.

Electrical connection coil	several connection types available, see ordering code
Protection class solenoid coil to ISO 20 653 / EN 60 529	several classes of protection available, see ordering code (with appropriate mating connector and proper fitting and sealing)

NOTE!

The switching time can be strongly dependent on flow rate, pressure, oil viscosity and the dwell time under pressure. In practice, the switching time may therefore deviate from the specified value range.

IMPORTANT!

1) When fitting the screw-in cartridge valve, use the specified tightening torque. The value can be found in the chapter "Technical data".

NOTE!

The seals are not available individually. The seal kit order number can be found in the chapter "Technical data".

ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.
